About Steril-Aire[®], Inc.

In the 1990s, Steril-Aire[®], Inc., the manufacturer of Steril-Zone[™], pioneered the use of germicidal ultraviolet (UVC) light for mold and microbial control in commercial and residential air conditioning systems. Building managers and engineers quickly recognized that Steril-Aire “UVC Emitters[™]” could provide a new level of air cleanliness not possible with conventional air filters alone. Today, these devices are found in thousands of buildings around the world including hospitals, clinics, laboratories, schools, government facilities, office buildings and homes.

Steril-Aire has earned more patents, more industry awards, and greater worldwide acceptance than anyone in the UVC industry. Steril-Aire experience and reputation have become synonymous with the best indoor air quality solutions available. With Steril-Zone, the company has combined its patented UVC technology with other state-of-the-art air cleaning technologies to create a portable room air purifier ideal for residential rooms and many other indoor environments.

For general information on the company, go to www.steril-aire.com. For an index of recent published articles on Steril-Aire UVC technology, visit www.steril-aire.com/story. For information on Steril-Zone, go to www.steril-zone.com.
